

2018/19 RFP

Europa research Facility 2047

The Foundation Society has announced its intention to construct a Phase 1 research facility on Europa.

The research facility will provide accommodation for 200 individuals. Housing will be composed of group accommodation, but should, nevertheless, be aesthetically pleasing in design. The main focus is as a research facility and to set the stage for a larger settlement whose mission will be to drill through the surface and into the sub-surface ocean.

Explain how the settlement will be constructed. While this is a “phase 1” spartan facility, it’s primary purpose is the establish the infrastructure essential to a future larger settlement. It is assumed that a mother ship will be in orbit to provide support.

Proposals must include:

- **A detailed method and sequence of construction.**
- **Overall plan for the research facility.**

It will be important that the inhabitants have the ability to work both in and outside the facility.

Sample Document

The video submission deadline will be 23:59 UTC, December 15, 2018

Results will be announced in the blog on January 20, 2019
